

JOCR Best Reviewer Award 2013-2014

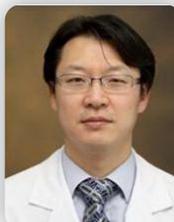

We are glad to announce the “JOCR Reviewer’s Award 2013-2014”

Reviewers are the one of the most important pillars of any academic publication and JOCR has been lucky to have many dedicated reviewers that have contributed their precious time and effort. A lot of credit for success of JOCR goes to our reviewers and as per the tradition of JOCR we are announcing the best reviewer award for year 2013-2014. We additionally thank all our reviewers who have helped improve the quality of articles in JOCR and also contributed with direct suggestions to editorial board to further enhance the journal outreach.

Dr. SS Suresh

I thank the Editorial team of jocr for recognizing the efforts of reviewers specially the policies of printing our photographs in each issue and also giving us certificates for each article we review. I am associated with JOCR both as reviewer and authors and I believe being a reviewer for the journal has helped me learn to write better manuscripts. Thanks again for the honor...

Dr. Tae-Young Kim

This is my thoughts about JOCR and our reviewers

JOCR is started recently but contains a number of challenging cases and the guides of their solutions which the surgeon could meet in the field of orthopaedic surgery. We should not forget our original intention. We must keep in mind to review the articles fairly, not to hold the authors in disrepute. We also make efforts that the submitted articles should be remodeled as excellent ones with our excellent and devoted comments. I hope we will be able to make the JOCR into a journal that authors, readers and editorial board members look to as a leader in the field, due to its outstanding contributions to academic communication in the field of orthopaedics.

Dr. Ashwin Kasturi

Thank you editorial team JOCR. .

I am pleased by ur recognising my work as reviewer. I am always ready & happy to contribute to the field of Orthopaedics in which ever way possible. JOCR is doing a great job in encouraging & bringing young researchers to a platform for a better exposure,sharing of ideas & shaping the future of orthopaedic surgeons.
